SHIV × SHREE MANGLAM

Phase 1 Product Requirements Document

A luxury, mobile-first fashion storefront with a secure product-management dashboard and an editorial gallery.

DOCUMENT	PRODUCT	RELEASE
PRD v1.0	Shree Manglam	Phase 1

PRODUCT VISION

Create a premium digital storefront for Shree Manglam, an Indian fashion brand offering sarees, poshak and suits. The experience should communicate quality and exclusivity immediately through editorial photography, refined typography, restrained motion and carefully crafted details.

CORE PRINCIPLE

Visual quality attracts attention; product photography builds desire; clear navigation and WhatsApp enquiries make the site useful for the business.

Prepared for SHIV implementation planning • 11 October 2026

1. Goals and users

Primary goal: deliver a visually distinctive storefront that feels bespoke and premium while remaining fast, maintainable and affordable to operate.

Target users

- Customers browsing sarees, poshak and suits on mobile phones.
- Wedding, festive and occasion-wear shoppers.
- Instagram visitors who want to explore more products.
- Shop owners or staff who need to manage products without coding.

Success criteria

- Visitors can discover products, inspect multiple photos and contact the shop easily.
- An authorised administrator can manage products and gallery content without developer assistance.
- The website remains responsive and usable on slower Android devices.
- The architecture supports future checkout, payments and order management without replacing the catalogue.

2. Phase 1 scope

2.1 Luxury homepage

- Editorial hero section with premium imagery, brand identity and the tagline “Tradition Meets Elegance”.
- Featured products and curated collections.
- Shop-by-category navigation: Sarees, Poshak and Suits.
- Instagram gallery preview and WhatsApp enquiry call to action.
- Responsive layouts for mobile, tablet and desktop.

2.2 Product catalogue and detail pages

- Product cards show name, category, price and a clear primary photo.
- Support multiple uploaded photos per product, with swipe/click carousel, thumbnails or a gallery indicator.
- Optional compare-at price, offer price, fabric, colour and occasion attributes.
- Availability status and featured-product label.
- Product detail view with all photos, description and WhatsApp enquiry including product name.
- Category filtering and sorting.

2.3 Dedicated gallery page

- Support Instagram Reel URLs using permitted Instagram embeds; provide a fallback link to the original post.
- Support multiple uploaded photos for new arrivals, collections, fabric details and styling.
- Consistent editorial grid, full-screen image viewer/lightbox and optional links to original Instagram posts.
- Admin can add, edit, reorder and delete gallery entries.
- Use static previews where possible and lazy-load embeds/media for performance.

2.4 WhatsApp enquiries

- Provide a clear contact/enquiry action on product cards or detail pages.
- Pre-fill the product name and, where practical, its public URL in the WhatsApp message.
- No cart, online payment or automated checkout in Phase 1.

3. Admin dashboard requirements

The admin panel is a core deliverable. It must allow the shop owner to manage public content without editing code.

Required capabilities

- Secure administrator login and logout.
- Create, edit, publish, unpublish and delete products.
- Upload multiple photos per product; select the cover image; reorder images; remove individual images.
- Manage product categories, descriptions, prices, attributes, availability and featured status.
- Create, edit, reorder and delete gallery items; add Instagram Reel URLs.
- Preview changes before publishing.
- Dashboard overview with product counts and recently updated products.
- Confirmation dialog before destructive deletion and useful validation/error messages.

Product data model

Field	Requirement
Product ID / slug	Unique system-generated ID and unique URL-friendly slug.
Name / category	Name required; category such as Saree, Poshak or Suit; allow configurable categories.
Description	Optional product description.
Price	Required; store monetary value in paise and validate server-side.
Compare-at price	Optional original/reference price.
Images	Multiple image records; one primary image when images exist; explicit display order.
Attributes	Optional fabric, colour and occasion.
Availability	Available, unavailable or made-to-order.
Featured / status	Featured boolean; draft or published status.
Timestamps	System-generated creation and update times.

Multi-image upload workflow

- Select or drag-and-drop multiple image files.
- Validate file type, size and dimensions; show previews and upload progress.
- Allow reordering, cover selection and individual image removal.
- Optimise images into responsive formats and sizes.
- Store media in object storage and metadata/URLs in the database.
- Clean up failed uploads and deleted media safely; do not break media shared elsewhere.

4. Luxury visual design system

Design direction: luxury Indian couture meets modern editorial e-commerce. The website should feel expensive through craft, restraint and image quality—not excessive decoration.
